

Brand book

KEVIN RYAN & ASSOCIATES · VISUAL IDENTITY · VERSION 3.1.0

The identity for Kevin Ryan & Associates. One wordmark, one mark, one palette taken from the development environment, and a set of rules that a person or an agent can apply without asking a further question.

CHANGED IN 3.1.0

Two colour decisions moved after 3.0.0 was stamped, so a 3.0.0 copy of this book carries different hexes. The light lockup is now the site background with a print blue ampersand, having been black with teal. The print accent set is now derived rather than chosen: hue is held from the Moon value and lightness walked down until each clears 5.5:1 on warm white. Nothing else changed.

HOW TO READ THIS

Every value in this document is a token, not a description. Where a colour, size or space appears, the token name is printed beside it. Copy the token, not the value.

The palette is not owned here. It is lifted verbatim from the Tokyo Night Moon block in the dotfiles repository, which is the same source the terminal, editor and cluster tooling read. If that block changes, this document changes with it.

01

The wordmark

The wordmark is **KR&A** set in Space Grotesk at weight 700, tracked to `-0.05em`. All four characters share one weight and one size. The ampersand takes `0.02em` of optical padding either side because its bowl sits tighter than the flat sides of the R and the A.

The ampersand is the only glyph that carries colour. It is what separates the mark from plain text, so it is never dropped, never reweighted and never replaced with the word "and".

The wordmark 'KR&A' is displayed in a bold, sans-serif font. The ampersand is colored blue, while the other characters are white. The background is a dark blue-grey color.

Clear space

Clear space is one cap height of the K on every side. Nothing intrudes into that zone: no rule, no edge, no other mark. The dashed boundary below is drawn to scale.

GUTTER = CAP HEIGHT OF K

Minimum size

The wordmark holds down to **68px wide** on screen and **18mm** in print. Below that the ampersand thins past the point where the colour registers, and the mark reads as plain text. Use the mark instead.

Ampersand colour	Section accent	--sec
Aspect	2373 : 700	viewBox
Master format	SVG, outlined paths	.svg

02

The contextual ampersand

The page is syntax-highlighted. Each section owns one accent from the ramp and every accented thing inside it reads from the same variable. The ampersand is one of those things. It inherits `--sec` from the section it sits in, so the mark shifts colour as the reader moves down the page without a single per-page logo asset existing.

Seven accents are in the rotation. The remainder of the ramp is reserved for section furniture and is not used on the mark, because at small sizes yellow and green sit close enough to ink that the ampersand stops reading as accented, and red reads as an error state rather than a section cue.

 DEFAULT, COVER, CONTACT BLUE #82AAFF	 DOCUMENTATION CYAN1 #7DCFFF	 ABOUT, INFRASTRUCTURE CYAN #86E1FC
 CAPABILITIES, SPECIFICATIONS TEAL #4FD6BE	 ENTERPRISE DELIVERY, CI AND CD ORANGE #FF966C	 CAREER ARC, DECISION RECORDS MAGENTA #C099FF
 NEUTRAL FALLBACK INK #C8D3F5		

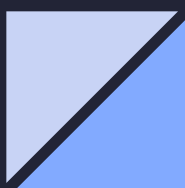

IMPLEMENTATION

Use `kra-wordmark-live.svg`, which fills the letters with `currentColor` and the ampersand with `var(--sec)`. Inline it rather than loading it through an `img` element, because an external SVG cannot see the page's custom properties. The fixed-colour files exist for contexts outside the site, not for the site itself.

The mark

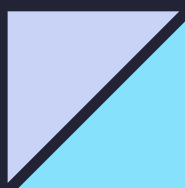

The mark is a square split on the diagonal. The upper left triangle is ink, the lower right is the accent, and a gap of 6.25% of the mark separates them. The whole figure is inset 16% from the edge of its ground, which is what keeps it legible as a favicon at 16px.

It is not a monogram and carries no letterforms. Where the wordmark is too small to hold, this replaces it: favicons, app icons, avatars, watermarks and anything below 68px wide.

Avatar

Square, mark centred at 62% of the frame. LinkedIn, GitHub, Slack.

kra-social-dark-800.png

Watermark

Transparent ground. Use at reduced opacity over a solid panel, never over a photograph.

kra-mark-transparent.svg

Colour

One theme. Dark only. There is no light variant, no toggle and no automatic detection. Body text meets 7:1 against its background and muted text meets 4.5:1. Every ratio printed below is measured, not estimated.

The Moon surfaces sit close together, so depth is carried by hairlines rather than by tonal contrast. The sunken surface exists to give alternating sections a visible step where the panel surface would be indistinguishable.

Print accents

Every Moon accent falls below 4.5:1 on warm white, so print takes a darkened set. Hue is held from the Moon value and lightness is walked down until the colour clears 5.5:1, which is a derivation rather than a choice and can be rerun from `tools/printset.py`. Print ink is the site background itself, so the light lockup stays in the family instead of falling back to black, paired with print blue on the ampersand.

05

Typography

Three families with fixed roles. Space Grotesk for display, headings and names. IBM Plex Sans for reading body only. IBM Plex Mono for all structure: numbers, metadata, tags, buttons, labels and table headers.

Uppercase is set in the mono face and nowhere else. The display and body faces are never uppercased by CSS. All three are self-hosted as woff2. No request leaves the origin to render type, which is a sovereignty requirement rather than a performance one.

DISPLAY

Aa

Space Grotesk

Weights 500, 600, 700. Headings, the wordmark, names and figures.

--font-display

BODY

Aa

IBM Plex Sans

Weights 400, 600. Reading copy only. Never a label, never a number.

--font-body

MONO

Aa

IBM Plex Mono

Weights 400, 500. Every label, tag, figure, button and table header.

06

Grid and spacing

All spacing derives from an 8px scale. An arbitrary pixel value is a defect, not a judgement call. The shell is 1400px with fluid padding, and the cover uses a twelve column grid that collapses to one at 900px.

The scale

--sp-1 · 8

--sp-2 · 16

--sp-3	· 24	
--sp-4	· 32	
--sp-5	· 40	
--sp-6	· 48	
--sp-7	· 56	
--sp-8	· 64	
--sp-10	· 80	
--sp-14	· 112	

SHELL	1400px
PAGE PADDING	clamp(24, 5vw, 72)
TOP BAR	52px
SECTION PADDING	112px, 64 below 900
READING MEASURE	68ch
COVER GRID	12 col, 7 / 5 split
BREAK, WIDE	1180px
BREAK, NARROW	900px

07

Structure and motion

01

Zero radius

Border radius is zero on every element without exception. Buttons, fields, panels, pills and images all square.

02

No depth effects

No shadows, gradients, glows or glass. Depth is expressed with the surface ramp and hairlines only.

03

Hairline structure

Structural lines are 1px. Emphasis edges are 2px and appear only on blockquotes, callout edges, cell hover edges and figure rules.

04

One dashed border

The dashed border belongs to the empty state and the clear-space diagram. It appears nowhere else.

05

Motion on input

Nothing animates on entry. Scroll-triggered reveals, marquees and any self-starting animation are prohibited.

06

00 HOME	01 WORDMARK	02 AMPERSAND	03 MARK	04 COLOUR	05 TYPE	06 GRID
---------	-------------	--------------	---------	-----------	---------	---------

Focus is a 2px square ring in the section accent at 3px offset. All motion is suppressed under reduced-motion.

Components that exist

The system is deliberately small. Adding a component is a decision, not a convenience.

COMPONENT	RULE
Status pill	Exactly three: live, draft, planned
Callout	Left edge and label carry colour. Body stays neutral. No icons
Table	No vertical rules, no zebra, no outer border
Button	One primary per view
Top bar	Left-aligned routes. No wordmark, no progress bar
Cell grid	The only card primitive. Two, three or four across

Deliberate absences

Non-bloat is a feature. These are not gaps waiting to be filled.

No icon set

Labels do the work icons would do.

No light theme

Adopting Tokyo Night Day is a separate decision.

No animation library

Transitions are CSS and respond to input.

No component framework

Plain CSS classes, consumable from any renderer.

Usage

✓ Do

Use the outlined SVG masters as the primary source. They render identically everywhere.

Inline `kra-wordmark-live.svg` on the sites so the ampersand inherits the section accent.

Keep one cap height of clear space on every side of the wordmark.

Swap to the mark below 68px wide, rather than shrinking the wordmark further.

Use the print accent set on warm white grounds, and only there.

Take colours, sizes and spaces by token name. Copy the token, not the value.

✗ Do not

Reweight, resize or reposition the ampersand relative to the letters.

Set the ampersand in yellow, green or red. Those three are outside the rotation.

Recreate the wordmark by typing it. Space Grotesk must be present and tracked, so use the file.

Apply shadows, gradients, outlines, glows or opacity changes to either mark.

Place a mark on a photograph without a solid backing panel.

Introduce a colour, a type size or a spacing value that is not in this document.

IF THE PALETTE CHANGES

This identity does not own its colours. They are read from the Tokyo Night Moon block in the dotfiles repository. If that block changes, regenerate the assets and this document rather than editing a hex value in either. The generator lives beside the site.

09

Asset library

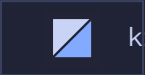

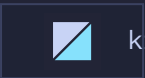

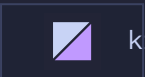

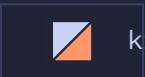

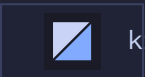

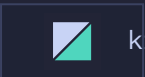

111 files. SVG is the master format in every case. Rasters are provided for contexts that cannot take vector, and are regenerated from the SVG rather than edited.
